

Veterinary

Case No. 19133

Submitter Brian Spevack

Report No. 7588

Test Type Parentage

Breed Alapaha Bulldog

Report Date 2/4/2009

Parentage Evaluation for the Mating of:	<i>Dam</i>	<i>Sire</i>
	27960 Madusa	27961 Kobe

Progeny	ID No.	Interpretation
Sequoia	27205	Parentage qualifies (Inclusion of sire and dam)

These results are based on data obtained from analysis of unique DNA loci in accordance with the standards and protocols set forth by DDC Veterinary. The accuracy of parentage interpretations is based on the information and samples provided by the client. DDC Veterinary does not assume responsibility of errors due to mislabeled or incorrectly sampled submissions. Conclusions concerning parentage (in the absence of any supplemental client information) are derived based on a mating of two unrelated individuals.

DDC Veterinary recommends that DNA samples from both the sire and dam be included in a parentage evaluation. If the sire or dam is not available for testing, the client should opt for extended testing using additional DNA markers. If these recommendations are not followed, the power to exclude an alleged parent will be compromised, thereby increasing the chance that the alleged parent will be falsely included as a biological parent.

DNA profiles have been provided within the laboratory data sheet. Additional individual DNA profiles can be ordered by calling 1-800-625-0874.
